The symmetry in the credit relationship

The global financial crisis caused by failure in performance of economy as entire system and its reasons determined by the instability of the money supply are considered. The availability of credit resources is disclosed, which actually became a basis of inflation of bubbles in the markets of assets. It was proved that after a peak of bubbles and slump in prices of assets the liabilities of households and firms were raised sharply. It is concluded that the processes taking place in the economy have symmetric character.

Keywords: a credit bubble, rise, recession, balance sheet recession, symmetry, symmetry in the credit relations.

Enhancing accuracy of the information about loan repayment arrears

The main tendencies of loan repayment arrears and the dynamics of an overdue debt of individuals and legal entities are considered. The insufficient information transparency about loan portfolios of banks and lack of recommendations concerning critical limit of an overdue debt on a bank system and in credit institution separately are described. It is proposed to expand the bank statistics taking into account the debt sold to collection agencies and the notion of "troubled loan". The conclusion was done about the importance of entering of additional application instructions of the uniform methodology of distribution of information on an overdue debt, including the compulsory publication of internal loan classification by banks.

Keywords: overdue claims, tendencies, arrears in loan repayment, troubled loan.

About the production change and economy shift

The essence, form of appearance and feasible general approaches of accounting of requirements of re-formulated laws of the production change and economy shift in domestic management practice are described. It is proved, in particular, that the legitimacy of the formulation and perception of these economic laws in a system of economic laws is confirmed by different economies of the well-known socioeconomic structures and their corresponding methods of production. Arguments of operation of the law of production change and economy shift in modern conditions are adduced.

The problem of implementation of public-private partnership and the nature of private property

The socio-economic nature of private property are considered. Based on a study of difficulties in the implementation of projects of public-private partnerships and models of behavior of market agents, it is formulated the hypothesis of the dual nature of private property. It is offered a means to ensure the effective functioning of the public-private partnership projects and the whole of the Russian economy.

Keywords: mixed economy, mixed ownership, public private partnership, the nature of property, opportunistic behavior.

Theoretical approaches to the definition of sustainable balanced regional development

A balanced social and economic development is one of the key directions of the state policy at the regional level. In the article the author considers the main economic definitions characterizing the balanced development of «sustainability», «balance», «growth», «development». Three approaches to the «balanced development» concept are found in the scientific literature. Balanced development is represented by the author as the interaction of internal and compliance capabilities of the system to external forces. It was found that the development of approaches to find a solution of problems of social and economic development the policies was required in the region, which would not have rejected the «support of the regions», practices would be oriented to the «territorial development». The author formulated the definition of «sustainable balanced development of the region», which is based on the balance of resources and potentials of the territory, formed with the help of management tools that contribute to the development of systemic resistance to external perturbations. This definition is allowed to expand the theoretical understanding of this important sector of the regional economy, which will increase scientific knowledge in the field of economy in the future.

Keywords: balance, stability, region, development, socio-economic systems.
