To the 150th anniversary of the edition of the first volume of «Capital» of Karl Marx — the book of the millennium!

Briefly and succinctly it is stated and proved that the main work of Karl Marx «the Capital. Criticism of political economy» turned into the book of the millennium during the 150 years from the date of the edition! This is a real scientific research. It reflects public processes of the functioning method of manufacture extremely objectively, has really absorbed in itself the culture and experience of nations and has turned into the province off all mankind.

Keywords: K. Marx, the book of the millennium, the capital, criticism of political economy, 150 years from the date of the edition, the province off all mankind.

Monitoring of tax revenues and registration of participants of investment projects in the Sakha (Yakutia) Republic

The article shows the results of work of tax authorities of the monitoring of tax revenues from the organizations involved in the implementation of large-scale investment projects in the Sakha (Yakutia) Republic which carried out the control of tax base and statement on tax accounting of these structures and their separate divisions. Effective monitoring is allowed in the period from 2009 to 2016 to ensure substantial growth of revenue in the budget of the Republic at the expense of income taxes on the income of individuals and property organizations. The special attention was paid to the timely registration of separate divisions of those taxpayers which headquarters are outside of the republic. Different sources of information were used for this purpose. This has made it possible to register more than 70 separate divisions in addition and to provide an annual gain of the taxes for the regional budget of 3% to the total amount of tax revenues.

To gain control was proposed to introduce quarterly statistical form of the departmental tax reporting on the number of separate subdivisions of the out-of-town structures operating at the territory of the subject of Federation.

Pensioners quality of living improving as a priority direction of the state's social and economic policy

Abstracts, information about the authors and Reference list (in English)

For the last hundred years, scientific, technical, microbiological and spiritual progress have contributed to the formation of a high quality of life in the advanced countries. The progressive part of the world community considers necessary the condition for a high quality of life — transition to a model of sustainable development, which implies a rejection of the ideology of the consumer society. Sustainable economic growth and sustainable development are not synonymous. And by itself, the economic growth does not guarantee a high quality of life, a radical change in the very paradigm of development is necessary.

The problem of ensuring a high quality of life is aggravated also because the life expectancy of the population is increasing. To date, in developed countries, the proportion of elderly people is up to 30% or more of the total population. In this regard, a competent and fair pension system is a guarantee not only of the high quality of life of pensioners, but also the necessary condition for the well-being of all citizens.

In Russia, the state's social and economic policy aimed at improving the quality of life has its own characteristics, first of all, according to the list of tasks that need to be addressed in order to ensure a decent quality of life for Russian pensioners. For a scientific justification of the decisions, for example, on the extension of the retirement age, a more detailed analysis of the consequences of pension reforms is needed, as well as a forecast of not only demographic indicators, but also the situation on the labor market.

The article outlines the main tasks, the solution of which will help to improve the quality of life of pensioners in Russia — the most socially vulnerable and unprotected part of the population. And the first of these is the further reform of the RF Pension System.

Keywords: quality of living, pensions, socio-economic policies, sustainable development.

About the monopolism (a round table discussion)

The modern monopolism multidimensionality is confirmed starting from usual fiscal functions and up to strategic tasks, including the society and world safety. Its essence is proved as a concentration of the exclusive power establishing rules, laws, whereby the producer (seller) catches and controls the certain market segment, dictates the exclusive terms, including high prices. The monopolism through a prism of political economy is imperialism as the highest stage of capitalism, the state-monopoly capitalism, features of key tendencies: stagnation and/or progress.

Keywords: monopolism, monopoly, competition, state, public services, state-monopoly capitalism, imperialism, natural monopoly, stagnation, progress, safety, exclusive rent, monopoly price.
