Organizational and institutional forms of implementation of transport-transit potential of Russia on a basis of state-private partnership. Part I.

This article reviews the theory and practice of application of public-private partnership (PPP) mechanism within implementation of investment projects aimed at development of the transport and transit potential of Russia. It demonstrates that PPP should be considered broadly as the utmost possible way of interaction between the public and private sectors aimed at increasing value added ensured within the country, and infrastructural tool to ensure increased export of transport services. The article reveals, systemizes and analyzes major internal and external unfavorable factors impacting on the volume of transit cargo transportation throughout Russia. It particularly describes the complex impact on implementation of transport and transit potential of the country, implementation of the China People's Republic's Project on Silk Road Economic Belt, independent policy of the Eurasian Economic Union's (EAEU) member states — Belarus, Kazakhstan, Armenia and Kyrgyz Republic in the area of construction of transport infrastructure and arrangement of transboundary transportation, consequences of transit conflicts with neighboring countries and EU countries. The article reviews main active projects on development of transport and transit system of Russia with application of PPP mechanism: establishment of Moscow-Kazan high-speed network with its further extension to the Chinese border, construction of transport and logistics facilities in Chelyabinsk and Kaluga provinces, ensuring infrastructure for transit cargo transportation via the Northern sea route, participation of foreign investors in development of Russian seaports and approaches to them. It proves that development and implementation of Russia's transport and transit potential, improving competitiveness of the Russian carriers at the global transport services markets requires establishing large-scale transport and transit

## Annotations to the articles

companies, merging and enlarging existing enterprises. However, as the experience of establishment of Unified transport and logistics companies (UTLC) showed, contradictions between the founders, EAEU participating states' individual programs on development of their transport and transit potential prevents implementing competitive advantages of this integration project to the full extent. With this regard, the article focuses on identification of opportunities and necessity of administrative transformations associated with the establishment of a large public-private transport company capable of competing with the global maritime container services in the route of Asia-Europe. It develops main areas and activities within the proposed national project of "Development of Transit Economy of Russia: connecting Eurasia" and its subprogram "Establishment of Innovative Rolling Stock for Container and Mixed Transportation". This article is the first part of the study. The second and third parts will be published in the magazines «Today and tomorrow of the Russian economy» and «Scientific Review. Series 1. Economics and Law» in 2016.

*Keywords:* public-private partnership, institutions/mechanisms, organizations, transport and transit potential, infrastructure projects, transport construction, investments, concession, transport and logistics companies, rolling stock.

Exports of agricultural products as a priority measure for the strengthening the country's economic security

The attempt is made to prove the export of agricultural goods as the important direction of strengthening of economic safety of the country. It is proved that it is possible to change the balance of import and export (trading balance) only to those states, which goods are competitive. At the same time it is proved that at present conditions of sanctions, Russia recovers a quite competitive agrarian production in the domestic market, thereby strengthens the economic safety of the food sphere.

The development of the banking sector of Bahrain

The formation and modern functioning of banking sector of Bahrain is considered. Thanks to an advantageous geographical position, the saved-up historical experience of the conducting international trade, the discover of inventories of hydrocarbons and receipt of their export income, the country has set the task of transformation into the international financial center. Ensuring the transparency of the legislation, following to international standards of banking activity, creation of the favorable cosmopolitan atmosphere, maintenance of stability and openness of economy — all this helped not only to dynamic development of Bahraini banks, but also transformation of the country into the regional and international financial center. The leading banks of the world are provided in the kingdom today. The special role of Bahrain consists in creation of the Islamic bank industry which shows the stable development, despite the world financial crisis phenomena. The high-quality growth of Bahraini banks is shown in their expansion abroad also. The Islamic bank Al Baraka Bank working and having establishments in 15 countries acts as one of examples of the similar phenomenon.

*Keywords:* Bahrain, banking sector of Bahrain, assets and liabilities of banks, Islamic banks.
